### 6 SPEED SEQUENTIAL GEARBOX CONVERSION KIT

- Gearbox kit designed to convert the standard Porsche 996/997 GT3 transmission to sequential shift, dog change.
- Torque rating for endurance events is 800Nm (600ft.lb).
- The gearbox kit includes 6 forward ratios and the selection mechanism.
- All gears are removable from shafts with an extensive range of ratios to select from.
- Input is via a removable quill shaft.
- Optional non-standard clutch splines and lengths are available to customer specifications.
- A gear position sensor is supplied for interfacing with an electronic dash display. Alternatively a stand-alone gear indicator display is available for cars not fitted with an electronic dash.
- Case hardened nickel chrome steel is used for all gears and shafts.
- The selector forks are high strength aluminium bronze.
- The kit is also available with profile ground gears, for increased efficiency and durability.
